

We introduce Distributed Liquefaction

Our Distributed Liquefaction Solutions are designed to condition every type of gas, to liquify it right at the source and supply it reducing emissions and fuel production and distribution costs.

GAS SOURCES

Adapted to the monetization of multiple gas sources.

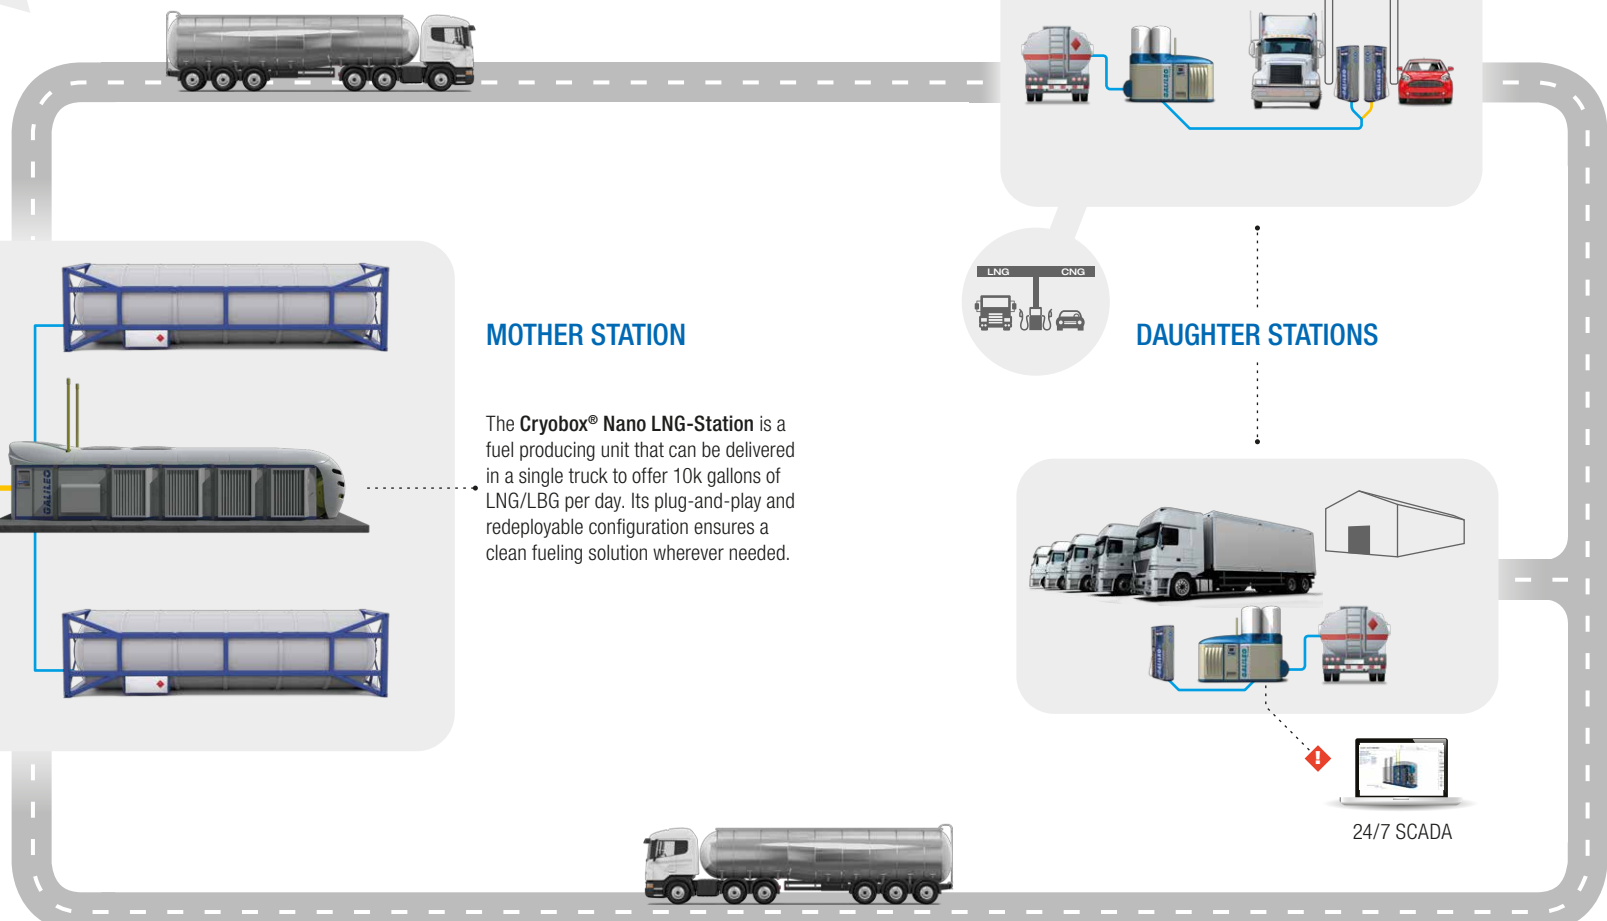

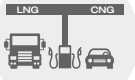

LNG/LBG Virtual Pipeline

LNG/LBG is the best option for any applications which involve long distances and high energy demand in short time periods.

Scalable installed capacity to fit the increase on demand through the progressive incorporation of modules.

Satisfaction of tailored fuel demands from communities and high horsepower consuming companies.

MOTHER STATION

The Cryobox® Nano LNG-Station is a fuel producing unit that can be delivered in a single truck to offer 10k gallons of LNG/LBG per day. Its plug-and-play and redeployable configuration ensures a clean fueling solution wherever needed.

DAUGHTER STATIONS

Our Cryobox® is the technology for LNG production chosen to feed the gas turbines of the first environmentally clean and high speed ferry in the world.
