

Virtual Pipeline™: A Galileo brand

is an innovative solution developed by Galileo that allows access to energy resources in remote or unattended areas, offering flexibility and reliability to close the gap between traditional pipelines and end consumers.

GAS SOURCES

Adapted to the monetization of multiple gas sources.

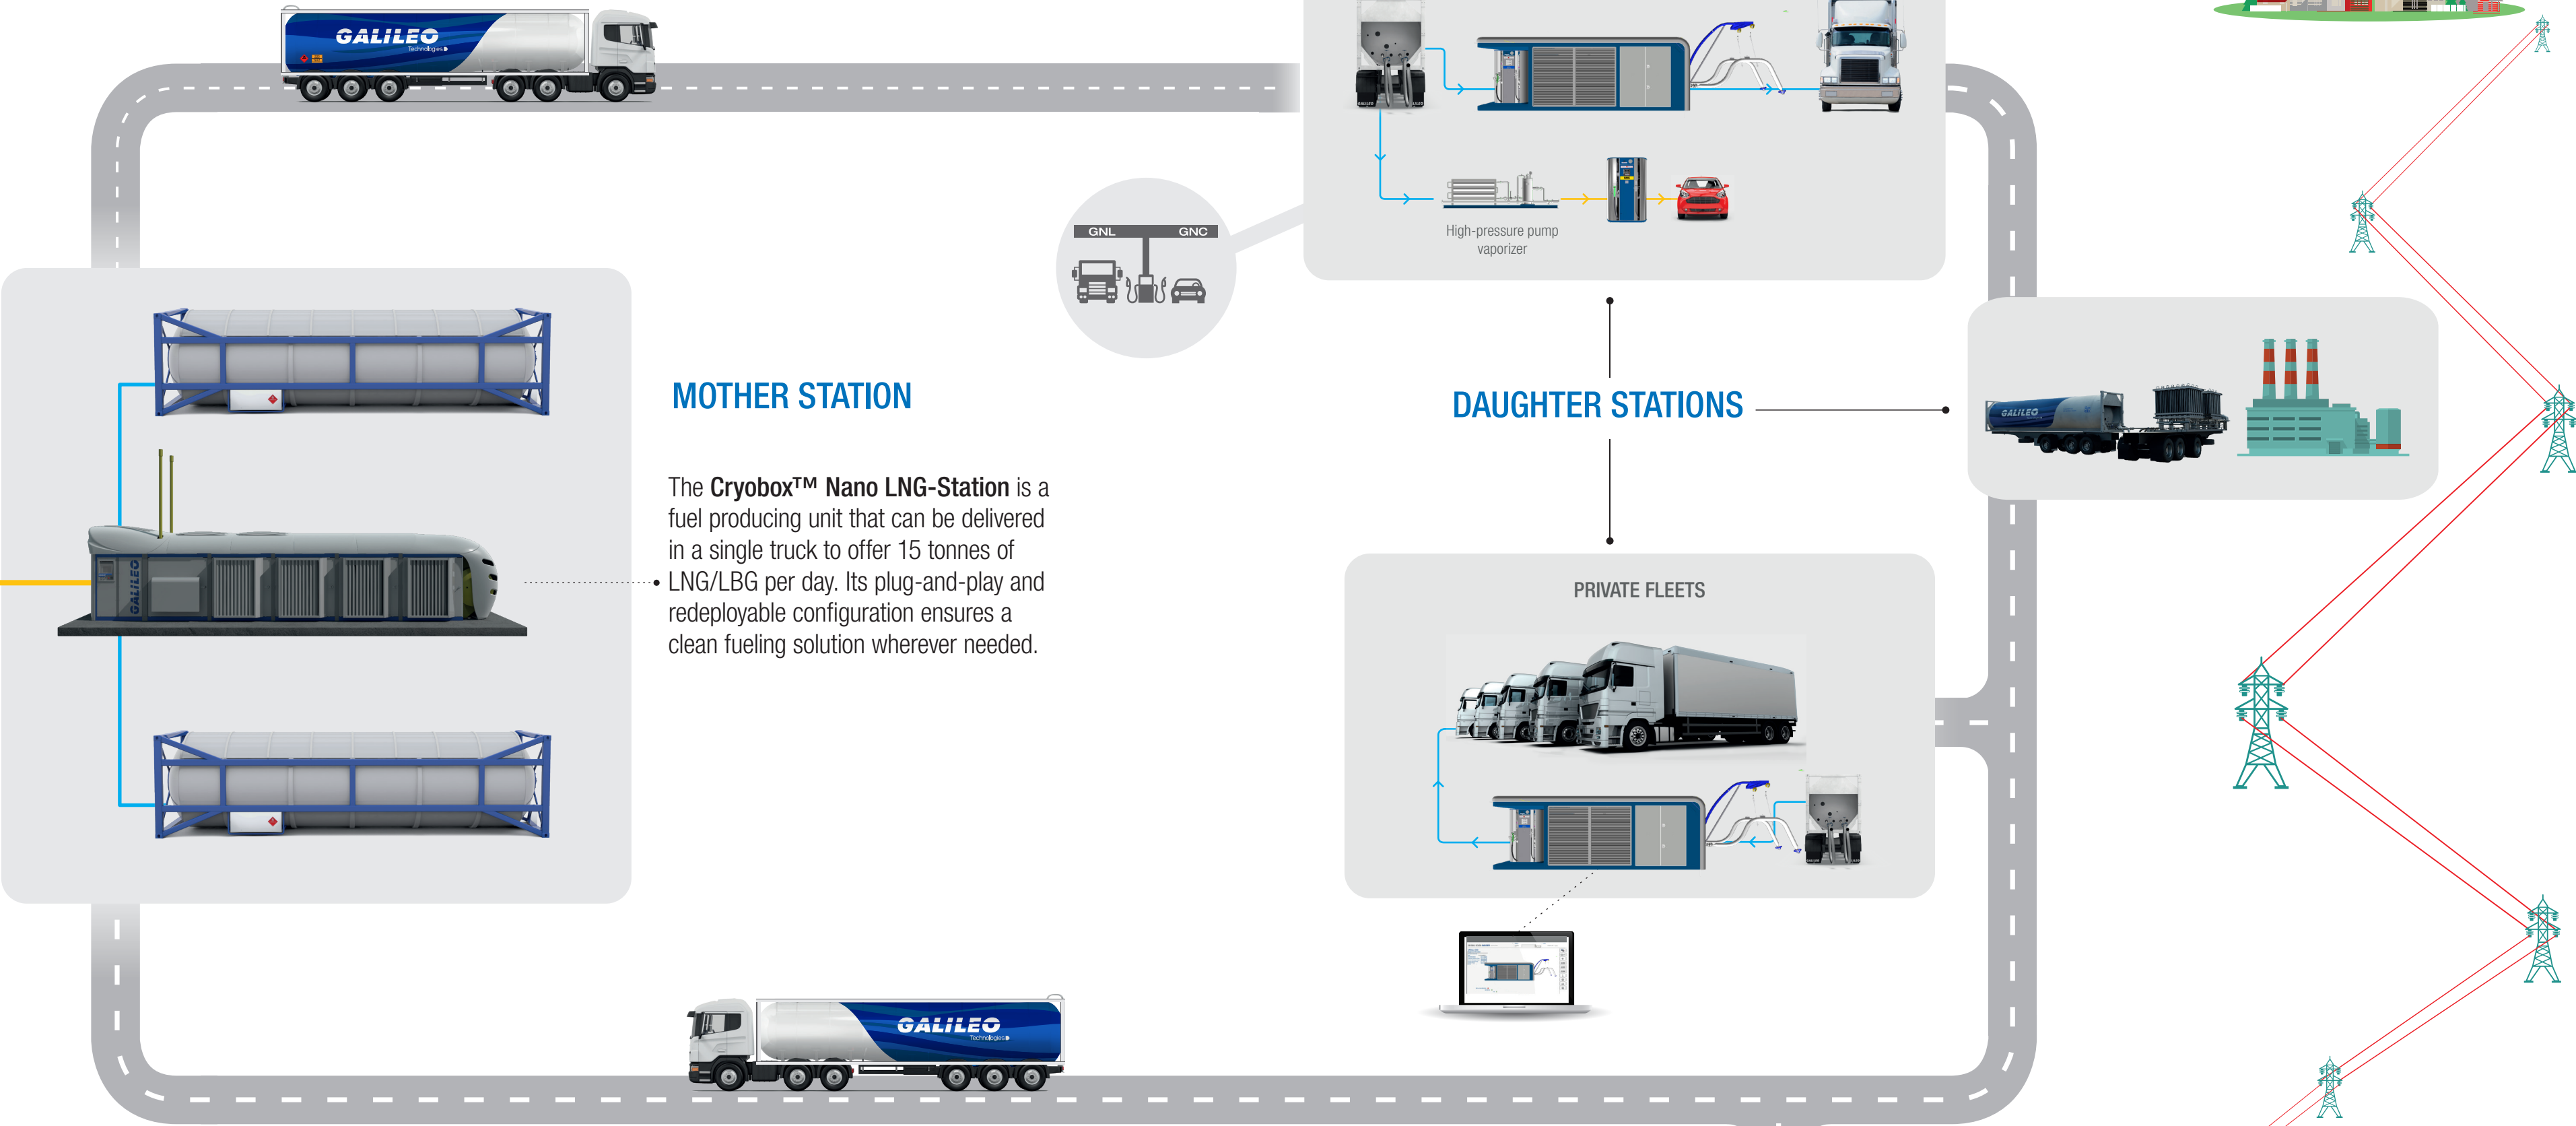

LNG/LBG Virtual Pipeline™

LNG/LBG is the best option for any applications which involve long distances and high energy demand in short time periods.

Scalable installed capacity to fit the increase on demand through the progressive incorporation of modules.

Satisfaction of tailored fuel demands from communities and high horsepower consuming companies.
